

Automated Essay Grading for ELs: Sprint 2

Sally Shin
EC601 Fall 2022

CONTENTS

01 PREVIOUS GOALS

02 INITIAL LOOK AT TRAIN DATA

03 LITERATURE REVIEW

04 NEXT GOALS

PROJECT GOALS

AIMS

- Kaggle competition
- Grade essays from English Learners while taking into account their skill levels
- Explore transformer NLP architecture model through the project

GRADING CRITERIA

- **Cohesion:** How sentences or paragraphs flow naturally
- **Syntax:** Correct order of words in phrases and sentences
- **Vocabulary:** Number of unique words
- **Phraseology:** How different phrases may present
- **Grammar:** Correct usage of punctuation, word order, word usage, among others
- **Conventions:** mechanics of writing, notably capitalizations and punctuations

USERS

- Teachers who may need help in grading essays from students of all backgrounds
- Writers who wants to test out automated grading essays for their short essays

PREVIOUS GOALS

Accomplished/Touched upon

- Literature Review - 2 important papers detailed
- Check dataset - Ran initial data analysis & closer look at training dataset

Did not accomplish

- Detailing each grading criteria

BASIC DATASET INSIGHTS

- Training set has 3911 entries, each with 6 different supervised scores
- Median number of characters: 2173
- Median number of words: 402

	text_id	full_text	cohesion	syntax	vocabulary	phraseology	grammar	conventions

"Dear Principal,\n\nOur school should have a community center. The reasons why, are so students can learn what our community needs, how to make our community better place, and why is community important for students to know. Its a great to have a community center to know how we can make things better.\n\nStudents think community center takes their time away. but they have to learn what our community needs. students will participate in a group of students making a list what our community needs, therefore students will learn what our community needs! students will present their list of things our community needs! due to that students will be giving extra credit for the ones who have low grades!\n\nSome students don't participate because their friends say its waste of time. it would not be waste of time when you get to know how our community can be a better place for us. students should know that the program is about our own lives, because if our community is bad well our lives are going to be bad. due to that students will want to participate and will want to make our community a better place for us.\n\nsome student might say why is the community important anyways, were fine nothing is wrong. but when get to know what our community is, they would want to know about and would want to participate and know why is our community important. students will receive a good grade if they participate in this community because is like an extra credit. due to that their friends would want to enjoy the program because their friend told them about it.\n\nso principal the community center will be a great place for students to learn lots of things. so i guess this will be a good idea for our school. students will learn what our community needs, how to make our community a better place, and why is our community important!\n\nSincerely, STUDENT_NAME"

- Example text
- Shows \n or \r or \t characters in some essays
 - Need to be removed during data preprocessing

BASIC SCORING INSIGHTS

- Overall an even spread of each grading categories
- Median of 3.0 for all of the categories
- Highest correlation with Vocabulary and Phraseology
- Other higher correlations with Syntax and Phraseology & Grammar and Phraseology

LITERATURE REVIEW: AES using efficient transformer-based NL models

Ormerod et al.

- Goal: To achieve significant results with modest computational and memory budget
- Transformers score highest on GLUE (General Language Understanding Evaluation) benchmarks
 - But with high computational and memory resource costs
- Considered models Albert (12M), Reformer (16M), Electra (14M), and Mobile-BERT (24M) on different set of student essays from Kaggle
 - All have different tricks to be more efficient
 - Linear layer applied to make embedding size more manageable
- Conclusion: Lesser but very comparable quadratic weighted kappa (QWK) compared to larger models

	Essay Prompt							
	1	2	3	4	5	6	7	8
Rater score range	1-6	1-6	0-3	0-3	0-4	0-4	0-12	5-30

LITERATURE REVIEW: Classification of NLP Techniques

Zhao et al.

- Descriptive paper on different NLP techniques over time
- Focused on classifying and analyzing different types and scopes by using linguistic analysis levels
- Broad range of techniques (57 total) with brief description & task they fulfill
- Most notable analyses:
 - Frequency analysis: frequencies of words
 - Similarity analysis: numerical relatedness of different texts
 - Rule-based analysis: rules & patterns to analyze syntax & semantics
 - Syntactic analysis: represent relationship of its logical components
 - Semantic analysis: label semantically relevant components
 - Identify meaning of words and phrases in context
 - Relationship between words

IN PROGRESS for Next Sprint

- Configuring working environment for transformer training
 - Ongoing process
- Understanding workflow of NLP training
- Defining how to modulate each grading categories
 - Still need more literature review
 - Need to look into different corpora that can analyze these criteria

RESOURCES

- Dataset explorations:

LITERATURE REVIEW: AES using Transformers

Ormerod et al.

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

SECTOR NEWS

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

01 ANNOUNCEMENTS

1st ANNOUNCEMENT

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

2nd ANNOUNCEMENT

MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System—it's only a bit larger than our Moon

NEPTUNE

Neptune is the farthest planet in our Solar System. It's also the fourth-largest by diameter and the densest

MARS

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust, which gives the planet its reddish cast

02

BONJOUR

SALUT

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

SECTOR NEWS

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

03

IN BRIEF

NEWS

MERCURY

Mercury is the closest planet to the Sun and also the smallest one in our Solar System

SATURN

Yes, this is the ringed planet. It's a gas giant, composed mostly of hydrogen and helium

JUPITER

Jupiter is the biggest planet in our Solar System and also the fourth-brightest object in the sky

VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot

CUSTOMER REVIEWS

CHARLES JAMISON

"Neptune is the farthest planet in our Solar System. It's the fourth-largest by diameter and the densest!"

IRENE WATCH

"Mercury is the closest planet to the Sun and also the smallest one in our Solar System. It's only a bit larger than our Moon!"

JOHN JOHNSON

"Despite being red, Mars is a cold place. It's full of iron oxide dust, which gives the planet its reddish cast"
